

1. Its About Results

We work on large and complex projects every day which require a high degree of focus and organisation.

The Agile development and scrum methodology enables us to start sooner, achieve more and most importantly, provide the best possible results for our customers.

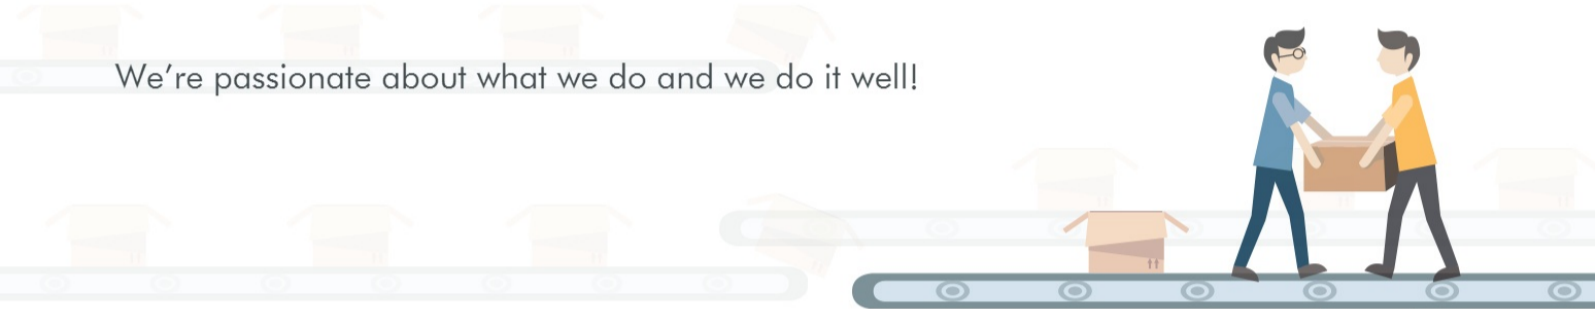

2. Working As a Team

“Alone we can do so little; together we can do so much”

Helen Keller

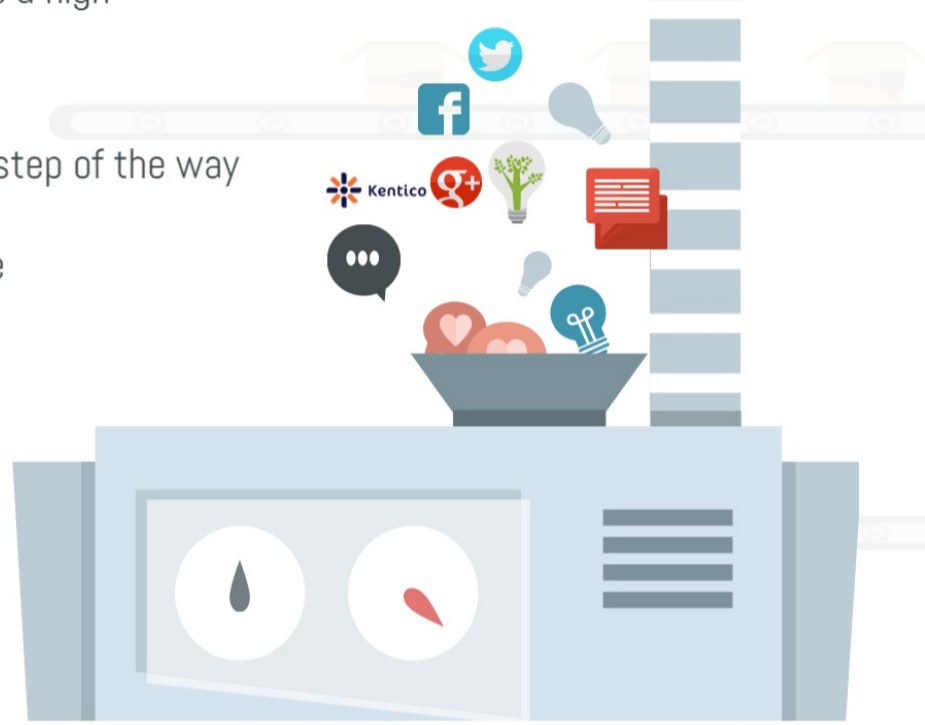

We're passionate about what we do and we do it well!

3. Project Management

Executing large projects requires a high degree of planning and focus.

- Client engagement every step of the way
- Projects delivered on time
- More controlled costs

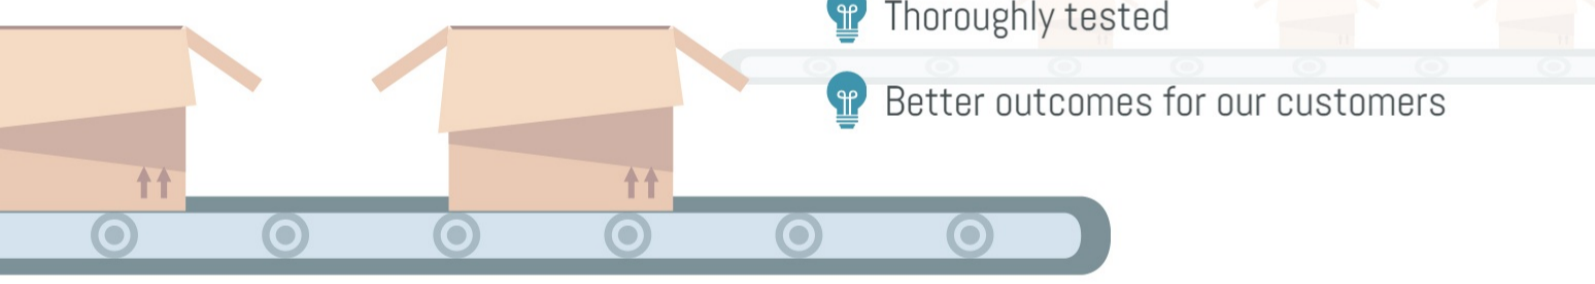

4. Delivering Quality

To remain competitive in the digital landscape, our clients require a high degree of quality work.

We have a proven track record in delivering a high degree of quality work.

- Improved functionality of customer sites
- Better design
- Thoroughly tested
- Better outcomes for our customers

5. One Big Automated System

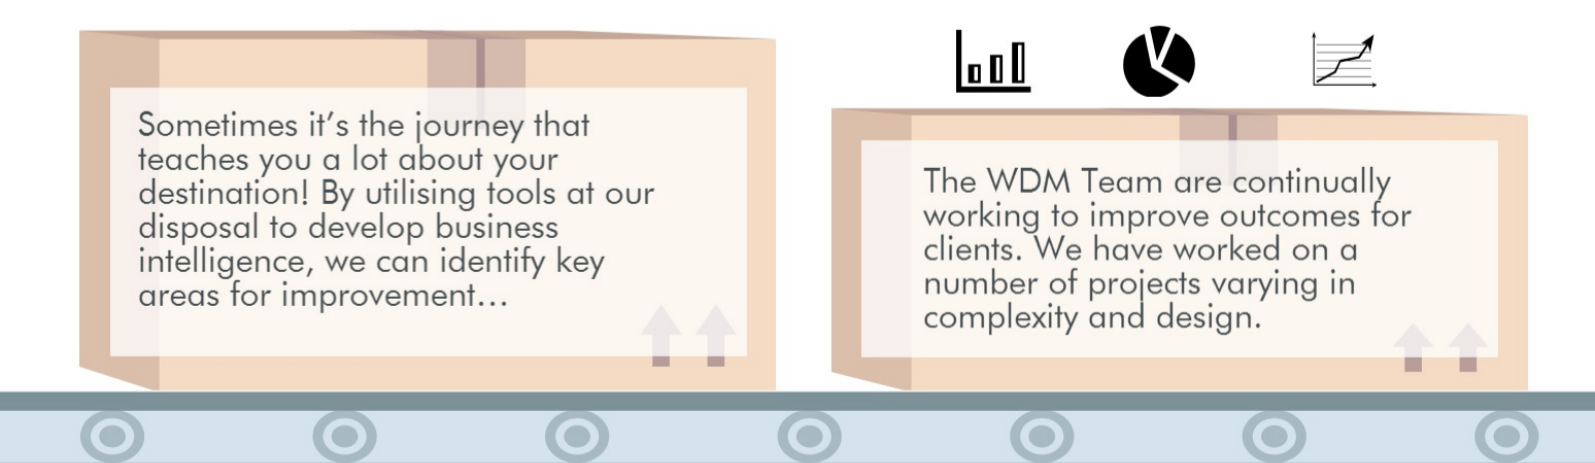

Technology only forms part of the solution - right? Even though that may be the case, technology allows us to focus on things that are more important like, making coffee... We're kidding! By automating our systems and processes, we have more time to focus on what's important, our customers!

6. Measure & Optimize

Sometimes it's the journey that teaches you a lot about your destination! By utilising tools at our disposal, we can identify key areas for improvement...

The WDM Team are continually working to improve outcomes for clients. We have worked on a number of projects varying in complexity and design.

Its Agile, Our Way

By adopting the Agile development methodology, we can start on large projects sooner. We have found that, working on large and complex projects, requirements change regularly. Customers are constantly thinking of better ways to improve things such as look, feel and functionality on their site.

It's also common place that customers want more for less! However, it's not always about price!

The WDM Team has adopted the Scrum and Agile development methodologies to overcome the above challenges and more!

Agile development allows us to work smarter on large and complex projects. We can start work sooner with greater flexibility to adopt changes throughout the development lifecycle.

We can now deliver projects with a higher standard of work sooner!
